### 技术规格

<b>Background:</b>	This gene encodes the penultimate enzyme of heme biosynthesis, which catalyzes the 6-electron oxidation of protoporphyrinogen IX to form protoporphyrin IX. Mutations in this gene cause variegate porphyria, an autosomal dominant disorder of heme metabolism resulting from a deficiency in protoporphyrinogen oxidase, an enzyme located on the inner mitochondrial membrane. Alternatively spliced transcript variants encoding the same protein have been identified.
<b>Applications:</b>	ELISA, IHC
<b>Name of antibody:</b>	PPOX
<b>Immunogen:</b>	Fusion protein of human PPOX

<b>Full name:</b>	protoporphyrinogen oxidase
